

Release Summary

Version 1.0.0 (Initial Release)

Core Features

- Basic expense tracking and categorization
- Simple budget creation and monitoring
- Immediate login (no authentication)
- File-based data storage
- Limited transaction entry (manual category selection required)
- No design patterns for income/expense categories
- Basic discount calculation

Known Limitations

- Minimal data validation
- No backup functionality
- Manual category management
- No reporting features
- Single-user focus
- Basic UI with limited feedback

Version 1.0.1 (Input Validation Update)

- **[PW-1]** Enhanced input validation for numeric inputs
 - Added comprehensive error handling for InputMismatchException
 - Implemented user-friendly error messages
 - Added input retry functionality
 - Fixed crashes for non-numeric value inputs
 - Applied validation across all numeric fields
- **[PW-10]** Enhanced category selection validation
 - Added validation for category selection
 - Fixed ArrayIndexOutOfBoundsException in category selection
 - Improved error handling for invalid categories

Version 1.0.2 (Discount Management Fix)

- **[PW-2]** Enhanced discount validation system
 - Added validation for discount percentage range (0-100%)
 - Fixed IllegalArgumentException in displayDiscounts()
 - Enhanced validation logic for negative values
 - Improved error handling for invalid entries
- **[PW-3]** Implemented duplicate discount prevention
 - Added duplicate discount code detection
 - Enhanced validation logic in DiscountHandler
 - Improved error messaging
 - Added unique constraint checking
- **[PW-7]** Fixed inexistent discount code handling
 - Added validation for non-existent discount codes
 - Improved error handling for invalid codes

Version 1.0.3 (Account Management Update)

- **[PW-4]** Resolved account data handling issues
 - Fixed NullPointerException in getUserId()
 - Added proper null checks for user sessions
 - Enhanced account deletion cleanup
 - Improved data validation
- **[PW-5]** Fixed discount persistence issues
 - Resolved discount persistence after account deletion
 - Improved discount allocation logic
 - Added validation checks for user ID
 - Enhanced cleanup procedures
- **[PW-11]** Enhanced user data removal
 - Implemented complete data cleanup on account deletion
 - Added transaction and budget file cleanup
 - Improved account deletion process

Version 2.0.0 (Major Update)

New Features

- Advanced transaction management with automated categorization
- Integrated discount management
- Dynamic reporting and analytics
- Multi-user support
- Real-time budget alerts and predictions
- Enhanced data validation and backup system
- Improved UI/UX with customization
- Transaction history with filtering

Version 2.0.1 (Database and Session Management)

- **[PW-6]** Implemented proper null checking in directory operations
 - Enhanced database features
 - Fixed multi-user session handling
 - Optimized database queries
 - Added robust error handling

Version 2.0.2 (Search and Reliability Enhancement)

- **[PW-8]** Fixed budget status viewing when over budget
- **[PW-9]** Resolved budget saving issues
- Added comprehensive transaction search
- Fixed budget calculation edge cases
- Improved backup system reliability
- Enhanced error logging
- Added automated validation checks

Version 2.0.3 (Performance and UI Update)

- Implemented performance optimizations
- Enhanced UI responsiveness
- Fixed reporting module bugs
- Added UI Constants for returning messages
- Added comprehensive input validation
